

World's Best 9-Quart Fuel Inspection Bucket?

We don't remember ever hearing a favorable comment about *porcelain* fuel inspection buckets. That's why we don't offer them.

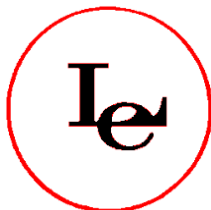

But thanks to a little help and encouragement from our friends, we are now able to offer something we can really get behind: a ***stainless steel*** bucket with a tough, flexible, brilliant white interior coating. It's not a tool bucket, but it will outlast any porcelain fuel inspection bucket we've ever seen at an airport or terminal.

The bucket is heavy-gauge stainless steel with *integral* ears (no rivets or welding) and a heavy bail handle. The pouring edge is extra heavy, not rolled. Not graduated.

Top Diameter: 10-½ inches
Height: 8 inches
(not including handle)
Capacity: 9 quarts (2.25 gal)
Part Number: LEE-5076-2
